

28) SECTION 3

slide 5

(linac)

e.g. SLAC had RF cavities $\frac{dE}{dx} = \frac{20 \text{ MeV}}{50 \text{ fm}} \cdot \frac{50 \text{ GeV}}{3.2 \text{ km}}$

$$= \frac{1.3 \times 10^6 \text{ eV m}^{-1}}{16 \text{ GeV nm}^{-1}}$$

for 7 TeV electrons

$$x_c = \frac{1.3 \times 10^{12} \text{ fm}}{1.3 \times 10^6} = \frac{180 \text{ fm}}{16} \cdot x = \frac{7000}{16} = 440 \text{ km}$$

LHC magnets

protons $E = 7 \text{ TeV}$

radius = 4.3 km

$$B = \frac{7000}{0.3 \times 4.3 \times 1000} = 5.4 \text{ T} \quad (\text{Earth } \mu\text{T})$$

But can't have all ring being magnets (need RF cavities)

at LHC $\sim 60\%$ ring is magnets $\Rightarrow B = 8.4 \text{ T}!$

Synchrotron radiation

$$\frac{P_e}{P_p} = \frac{m_p^4}{m_e^4} \sim 10^{13}$$

Slide 14

$e^+ e^-$ collide, typical cylinder detector

53

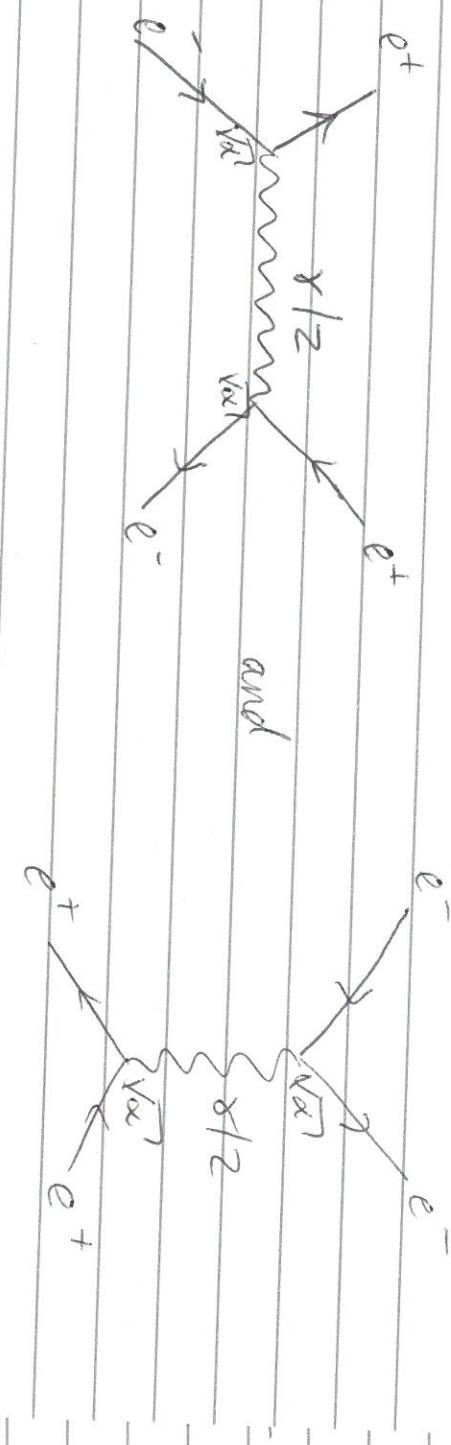

54

55

56

$$e^+ \bar{E}_1 = 44.7 \text{ GeV} \quad |\vec{p}_1| = 46 \text{ GeV}$$

$$e^- \bar{E}_2 = 46.0 \text{ GeV} \quad |\vec{p}_2| = 49.5 \text{ GeV}$$

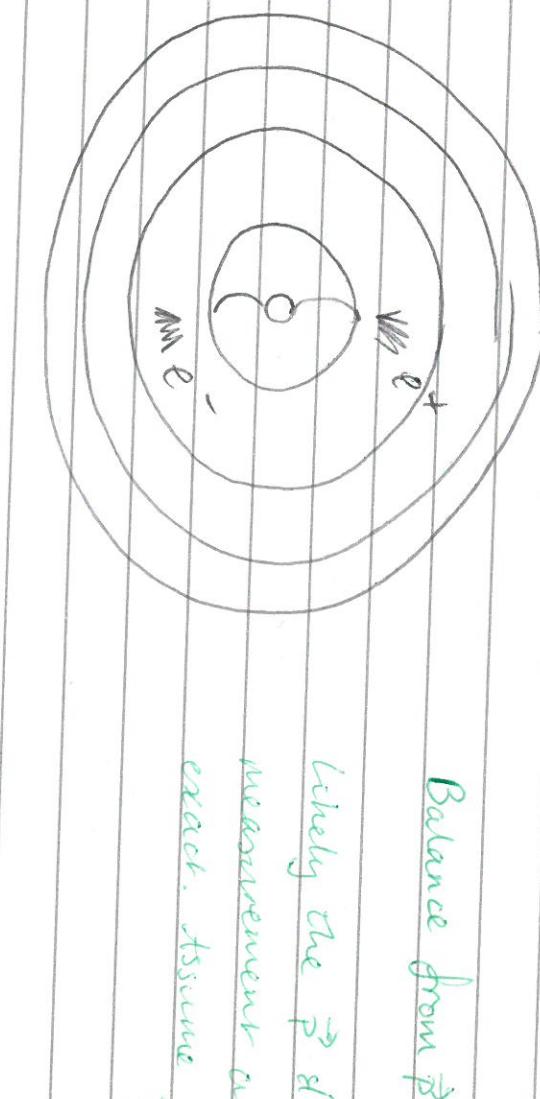

Balance from \vec{p} cons.

Likely the \vec{p} and \vec{E}

measurement are not

exact. Assume $\frac{\vec{p}}{|\vec{p}|} \sim 10\%$

To conserve momentum, e^+ & e^- are back to back

$$\therefore \vec{p}_1 = -46 \text{ GeV} \quad \vec{p}_2 = 49.5 \text{ GeV}$$

$$M_{ee}^2 = (\bar{E}_1 + \bar{E}_2)^2 - (\vec{p}_1 + \vec{p}_2)^2$$

$44.7 + 46$

$+ 3.5$

$$M_{ee} = 90.6 \text{ GeV}$$

Close to 2 mass!

Slide 15

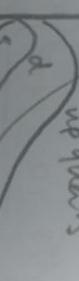

protons are not fundamental, point-like particles!

$$\begin{array}{c} q_1 \xrightarrow{x_1 \vec{p}_1} \leftarrow q_2 \\ x_2 \vec{p}_2 \\ x_1 \bar{E}_1 \\ x_2 \bar{E}_2 \end{array}$$

Need to understand x_1 & x_2 \rightarrow probability!

(gluons!) gluons up quarks

parton distribution function

$$E_{cm} = 2\sqrt{x_1 x_2} E$$

$$\begin{aligned} E_{cm}^2 &= (x_1 \bar{E}_1 + x_2 \bar{E}_2)^2 - (x_1 \vec{p}_1 + x_2 \vec{p}_2)^2 \\ &= \cancel{x_1^2} + \cancel{x_2^2} + 2x_1 x_2 \bar{E}_1 \bar{E}_2 - 2x_1 x_2 \vec{p}_1 \vec{p}_2 \\ &= 2x_1 x_2 \bar{E}_1 \bar{E}_2 (1 - \cos \theta) \quad \theta = \pi \pi \\ &= 4x_1 x_2 \bar{E}_1 \bar{E}_2 \quad \bar{E}_1 = \bar{E}_2 = \bar{E} \\ &= 4x_1 x_2 \bar{E}^2 \end{aligned}$$
