

Health warning!

(for those of you interested in
LHC dark matter constraints)

Rather worryingly, M_T kinks are at present the only known **kinematic** methods which (at least in principle) allow determination of the mass of the invisible particle in short chains at hadron colliders!

[We will see a **dynamical** method that works for single three+ body decays shortly. **Likelihood** methods can determine masses in pair decays too, though at cost of model dependence and CPU. See Alwall.]
